

PRODUCT DESIGN GUIDE

Whispertherm® Vertical Stack with Whisperpack® Chassis

Vertical Stack

Cabinet Nomenclature	1
Chassis Nomenclature	5
AHRI Performance Rating	8
Features & Benefits	9
Whispertherm® Thermostats	12
Unit Protection & LED Fault Status	13
Multi-protocol DDC Controller	14
Physical Data Table	15
Unit Voltage / Operating Limits	16
Whispertherm® 2-Row Performance Data	17
Whispertherm® 3-Row Performance Data	18
Airflow Performance Tables	20
Performance Data Correction Factors	21
Whispertherm® Standard Riser & TRU Details	34
Whispertherm® Extended Riser & TRU Details	35
Whispertherm® Split Riser & TRU Details	36
Whispertherm® TRU Connection Locations	37
Whispertherm® Cabinet Drawings	39
Whispertherm® Warranty Statements	52
Revision Table	56

Category	Position	Option Digit and Description		
Product Family	1	V =	Vertical Stack Water Source Heat Pump	
D 1 17		T =	Whisper Series Integrated Thermal Recovery Unit (Enthalpy Core)	
Product Type	2	N =	Whisper Series Integrated Thermal Recovery Unit (Sensible Core)	
0 1 0 5 5		A =	Heat Pump	
System Configuration	3	C =	Air Conditioning and Hydronic Heat	
		020 =	0.50-ton	
		030 =	0.75-ton	
		040 =	1.00-ton	
		050 =	1.25-ton	
Unit Capacity / Heat Exchanger	4,5,6	060 =	1.50-ton	
		080 =	2.00-ton Standard Performance	
		081 =	2.00-ton Enhanced Performance	
		100 =	2.50-ton	
		120 =	3.00-ton	
Revision (Major)	7	4 =	4th Generation	
11-24 //-14	8	F =	Dual Point Power: 208/230-60-1 Unit with 115-60-1 TRU Module	
Unit Voltage		H =	Dual Point Power: 265-60-1 Unit with 115-60-1 TRU Module	
Fon	Fan 9		ECM - Constant Torque Motor (Size 080 - 120)	
ran	9	G =	ECM - Constant Torque Motor (Sizes 020 - 060)	
		B =	Revision B	
Revision (Minor)	10	C =	Revision C	
		D =	Revision D	
		A =	Standard Quiet Construction	
Sound Attenuation	11	D =	Standard Quiet Construction with Silver Rail Isolation	
Sound Alternation	11	E =	Standard Quiet Construction with Silver Rail Isolation & Vibration Isolation Pad	
		F =	Standard Quiet Construction with Vibration Isolation Pad	
		B =	84 inch tall - Galvanized	
		G =	84 inch tall - Paint Grip	
		S =	84 inch tall with Factory Mounted Cabinet Stand	
Cabinet Type	12	L =	93 inch tall - Galvanized	
		M =	93 inch tall - Paint Grip	
		N =	93 inch tall with Factory Mounted Cabinet Stand	
		Z =	Special customer defined cabinet height - (Special Engineering Request is required)	

Cabinet Nomenclature

Category	Position		Option Digit and Description
		1 =	35 CFM (constant) / 150 CFM (intermittent with accessory switch) TRU Ventilation Rate
		2 =	50 CFM (constant) / 150 CFM (intermittent with accessory switch) TRU Ventilation Rate
		3 =	70 CFM (constant) / 150 CFM (intermittent with accessory switch) TRU Ventilation Rate
Manakilaki an	42	4 =	90 CFM (constant) / 150 CFM (intermittent with accessory switch) TRU Ventilation Rate
Ventilation	13	5 =	25 CFM (constant) / 100 CFM (intermittent with accessory switch) TRU Ventilation Rate
		6 =	35 CFM (constant) / 100 CFM (intermittent with accessory switch) TRU Ventilation Rate
		7 =	50 CFM (constant) / 100 CFM (intermittent with accessory switch) TRU Ventilation Rate
		8 =	70 CFM (constant) / 100 CFM (intermittent with accessory switch) TRU Ventilation Rate
TRU Voltage	14	A =	TRU Voltage: 115-60-1
		A =	Fan wiring - Single speed
		B =	Fan wiring - Single speed with 2-speed fan switch
	15	D =	Fan wiring - Single speed with Ultra-low airflow
Fan Control		E =	Fan wiring - Single speed with Ultra-low airflow and 2-speed fan switch
Fan Control		F =	F - Fan wiring - Two speed
		G =	G - Fan wiring - Two speed with Ultra-low airflow
		K =	DDC Wall Sensor
		Z =	Special fan control wiring scheme - (Special Engineering Request is required)
		1 =	1 Supply Air Outlet
		2 =	2 Supply Air Outlets
Supply Air Discharge	16	3 =	3 Supply Air Outlets
		P=	Knockout - all sides
		Z =	Special Supply Air Discharge Configuration - (Special Engineering Request is required)
		X =	None
		A =	Return Air Opening Cover
Cabinet Protection	17	B =	All Supply Air Openings Covered
		C =	All Supply & Return Air Opening Cover
		D =	All Openings Shrink Wrapped
		X =	None
Power Termination / Entry Location	18	A =	Side Entry - With Unfused unit disconnect
		B =	Side Entry - With Unit circuit breaker (Fused disconnect)

Category	Position		Option Digit and Description
		B =	T-stat Extension w/plug for offset mounting - 5 ft
		C =	T-stat Extension w/plug for offset mounting - 10 ft
		D =	T-stat Extension w/plug for offset mounting - 20 ft
		E =	T-stat Extension w/plug for offset mounting - 30 ft
		F =	T-stat Extension w/plug for offset mounting - 40 ft
		G =	T-stat Extension w/plug for offset mounting - 50 ft
Thermostat Extension	19	P =	Panel Mount Thermostat / Wall Sensor
		3 =	Factory Wired Remote Thermostat (Secondary Unit) - Right Side
		4 =	Factory Wired Remote Thermostat (Secondary Unit) - Left Side
		7 =	Factory Wired Remote Thermostat - Right Side
		8 =	Factory Wired Remote Thermostat - Left Side
		Y =	Special T-stat Extension w/plug length
		Z =	Special Thermostat Location
Control Type	20	A =	Solid State Control
	21	A =	32°F Freeze Protection with 36°F Low/High Liquid Temp setting
		E =	32°F Freeze Protection with 125°F Low/High Liquid Temp setting
Water Temperature Sensors		G =	20°F Freeze Protection with 20°F Low/High Liquid Temp setting
55.155.15		N =	10°F Freeze Protection with 10°F Low/High Liquid Temp setting
		P =	10°F Freeze Protection with 0°F Low/High Liquid Temp setting
		X =	No DDC control package installed
		A =	Whalen DDC Control (IO Zone 560) with current switch
		B =	Whalen DDC Control (IO Zone 560) no current switch
		C =	Customer supplied: DDC Controller - No sensors or fan speeds
		E =	IO Zone 560 DDC Control with Fan & Compressor status current switch
DD0 0	20	F =	IO Zone 560 DDC Control with Discharge Air Temperature
DDC Control	22	G =	IO Zone 560 DDC Control with Fault Alarm
		H =	IO Zone 560 DDC Control with Fan & Compressor status current switch with Discharge Air Temperature
		J =	IO Zone 560 DDC Control with Fan & Compressor status current switch with Fault Alarm
		K =	IO Zone 560 DDC Control with Fan & Compressor status current switch, Discharge Air Temperature, and Far
		L=	IO Zone 560 DDC Control with Discharge Air Temperature & Fault Alarm
		Z=	Special DDC Control - (Special Engineering Request is required)
2 . 2 . 2		A =	Standard Stainless Steel
Drain Pan Options	23	B =	Standard Stainless Steel with Condensate Pump
		A =	Fiberglass
	0.	B =	Foil Face Insulation - Entire Unit
Insulation Option	24	C =	Closed Cell Insulation - Entire Unit
		D =	Fiberglass Top of Unit - 1" in lieu of 1/2"
TRU Air Duct Connections	25	1 =	Top Connections

Category	Position		Option Digit and Description
		X =	Field installed
		A =	1" MERV 4 Throwaway
		B =	1" MERV 8 Throwaway
		C =	1" MERV 11 Throwaway

Typical Ventilation System Running Load					
Constant Ventilation Speed	Intermittent Timed High Speed (1)				
52 WATTS	98 WATTS				

⁽¹⁾ The unit is designed for constant 24/7 ventilation with a timed high-speed washroom exhaust.

The thermal recovery performance shown above applies to the Whalen Whispertherm® product with an integrated TRU.

Features & Benefits of the Energy Recovery Module

Integrated Thermal Recovery Unit The Whispertherm® includes an integrated thermal recovery unit (TRU) having easy access. The TRU is self-contained and includes all items needed for a fully-functioning engineered unit. The unit includes controls to ensure dedicated constant ventilation and high-speed exhaust.

- FreshPath™ Technology Industry exclusive system ensures fresh air is pre-treated, filtered (TRU prefilter and then the main unit filter) and conditioned before entering the occupied space.
- **May Assist in Additional LEED® Points** The Whispertherm® unit may allow for additional points based on ventilation and IAQ.

- Improves Indoor Air Quality (IAQ) Providing the living space with dedicated tempered ventilation air enhancing personal comfort. The unique unit design allows the Supply Air from the TRU to pass through the main unit filter prior to passing through the unit coil(s).
- **Multiple Ventilation Rate Settings** Factory preset ventilation CFM settings based on the living space size.
- "Polar Shield" & Defrost Cycle Included sensors protect freezing air from reaching the unit and/or the space. The outdoor air duct is closed-off and the TRU supply fan is de-energized. The TRU exhaust fan continues to operate, exhausting the warm recovery air from the washroom, until permitted operating conditions are reached.
- **MERV-6 filters** Standard filters are MERV-6 rated.
- Occupant (Washroom) Timers The timer allows for activation of timed high speed exhaust, eliminating excess humidity build up and/or odors from the recovery space. The timer is a momentary switch and is adjustable from 5-60 minutes.

Features & Benefits of Whispertherm®

- Internal Pump Internal pump is optional on all size units but cannot be used in conjunction with the two-way solenoid valve. The internal pump is an internally mounted ON/OFF circulating pump for use with our single riser applications.
- Tin Dipped Coil Optional tin electro-plated copper tubing protect the air coil from many corrosive elements in the air stream. Corrosion often referred to as Formicary Corrosion occurs due to the presence of dissimilar metals such as copper and aluminum in conjunction with water causes results in refrigerant leaks and eventual failure of the air coil costing hundreds of dollars to replace. Studies have also shown that isolating the copper from the aluminum greatly reduces or eliminates the corrosion thereby increasing the life of the air coil.
- Constant Torque EC Motor Are standard on all units and provide the efficiency and operability of an ECM at a lower cost than a constant airflow ECM. Constant torque ECMs provide 5 available

- motor speed settings and will maintain a constant motor torque as external static pressure in the system increases. As the system static pressure increases, reduction in fan airflow with a constant torque ECM is minor.
- Supply Air Grille Diffusers are constructed of aluminum with a mill finish or an optional painted finish, available in three variations: single deflection, double deflection, double deflection with opposed blade damper. Damper blades are positioned vertically and adjust easily for directing the unit discharge air.
- Flush Mounted Panel Constructed of heavy gauge steel, lined with insulation to help attenuate sound from the compressor and fan assembly. Magnetic clips ensure the panel doors stay closed during operation. Panel has 2 doors to access the chassis and to access the TRU. Panel is painted appliance white and contains a supply air grille for front supply units.

- **Telescoping SA Extension** Front supply units come with a sheet metal telescoping supply sleeve standard in the cabinet. A canvas connector can be used for top and side supply ducts. This reduces vibration-induced noise.
- **Cabinet Stand** An optional cabinet stand is available in heights ranging from 2" up to 14" to accommodate interiors with higher baseboard mouldings.
- **Unfused Disconnect** Units are available with an optional non-fused disconnect switch, located on the unit front behind the return air panel. The disconnect switch is used to break power to the unit for safety and ease of service.
- **Circuit Breaker** Units are available with an optional circuit breaker (circuit breaker for secondary overcurrent protection). The circuit breaker is used to break power to the unit for safety and ease of service.
- **T-stat extension** Low voltage wire harness ranging from 5 to 50 foot ending with 6-P-in Molex quick connector. The extension can exit cabinet on the side opposite of the riser location.
- Condensate pump The internal condensate pump allows the unit to be located virtually wherever desired. The internal condensate pump serves as an effective means for disposing of condensate generated during heat pump operation. A condensate pump should be designed and installed at the unit to pump condensate to a building drain.
- Vibration Isolation Pad Vibration isolator pads dampen vibration from the compressor and fan motors. The 1/2" thick neoprene isolation pads are attached to the bottom of the cabinet at the factory eliminating any additional field labor.
- 2-Way Valve 2-way valves are used for a variety of pumping applications when more than one unit is installed on a common loop. These valves are also used to shut off flow when the unit is not operating. On a call for cooling or heating the valve opens providing full water flow prior to compressor operation. A 24 volt control wire harness is included with the factory provided control valve option.

- Automatic Flow Control An automatic flow control device includes a ball valve cast in the valve body and is located on the return water pipe. The flow control valve consists of a stainless steel/brass flow cartridge and a contoured orifice plate. As the pressure drop increases, the flow cartridge will move into the contoured orifice plate to decrease the flow. This flexing action provides a constant flow, independent of pressure (2-80 psi), makes it difficult to clog and resistant to cavitation damage. This valve sets flow through the coil without any action required by a system balancer.
- Manual Flow Control A manual flow control valve, acts as both a flow setting device and a stop valve, taking the place of a ball valve. This valve allows water flow through the unit and can be set quickly and accurately.
- Ball Valve Ball valves allow the unit to be shut off for servicing purposes. They have a low resistance to water flow, operate easily. These valves have a compact handle that rotates 90 degrees to a fully open position. The valve body is forged brass and the ball is polished brass with Teflon seats and seals. Ball valves are included on both the supply and return risers.
- **Memory Stop** Adjustable Memory Stop provides both balancing and shutoff in one valve. With the memory stop locked in place, the valve can be closed and then reopened to the same balanced position.
- P/T Port An accessible port where pressure and temperature can be measured. Accepts standard 1/8" gauge adapter or thermometer stem.
- Strainer The Y-type strainer body is constructed of brass with a 20 gauge 304 stainless steel screen. Used for removal of small particles from the water supply pipe during normal system operation. The strainer helps protect the coil and minimizes the chance of control valves clogging. Screens should be regularly removed and cleaned as part of a routine maintenance schedule.

Stainless Steel Hoses Multiple hose connection types are available.

Insta-lock™ Connection - Braided Hoses Brass body with stainless locking balls and EPDM seals. 304 stainless steel (ASTM A580-18) outer braid. Full flow technology to minimize pressure drop.

GHT Connection - Flexible 302/304 stainless steel hose with EPTF inner tube and FGH connections. Meets UL-94 VO fire rating.

NPSH Connection - 304 Stainless Steel hose with Kevlar® reinforced EPDM core built to ASTM E 84-00 / NFPA 255 standard. EPDM gasket with female NPSH swivel on both ends to provide a reliable seal.

O.A. Internal Duct Three 5" diameter connections are required for TRU.

Filter Units come standard with a one-inch MERV 4 fiberglass throwaway filter. High efficiency MERV 4,

MERV 8, MERV 11, and MERV 13 pleated filters as well as a washable aluminum mesh filter are also available as an option.

Cu-Ni Coaxial Heat Exchanger The optional cupronickel tube-in-tube coaxial heat exchanger used in vertical stack water source heat pumps is designed for maximum heat transfer at normal and low water flow rates with minimum pressure drop. The inside tube is deeply fluted to enhance heat transfer and minimize fouling. All coaxial coils are tested to 400 psig on the water side and 600 psig on the refrigerant side. The extended range chassis has coil and piping insulation to protect against condensation in low-temperature geothermal applications.

Silver Rail Package The silver rail sound package further attenuates the sounds levels of our standard unit by adding a set of rubber in shear isolators under the compressor chassis rails to enhance the dual-level

Unit Protections & LED Fault Status Annunciation

Refrigerant Circuit High Pressure Protection

A normally closed high (compressor discharge) pressure switch is used to help protect the refrigerant circuit from excessively high pressure. If the high pressure switch opens twice within 1 hour, the control board will initiate a hard lockout and the alarm contact will energize.

Refrigerant Circuit Low Pressure Protection

A normally closed low (compressor suction) refrigerant pressure switch is used to help protect the refrigerant circuit from excessively low refrigerant pressure. If the low pressure switch opens twice within 1 hour, the control board will initiate a hard lockout and the alarm contact will energize.

Condensate Overflow Sensor

The control is designed to sense when condensate water levels in the drain pan become excessively high. When high condensate water levels are detected, the controller will go into condensate overflow warning mode. If the condensate overflow sensor detects liquid twice within 1 hour, the control board will initiate a hard lockout and the alarm contact will energize.

Heat Exchanger Low Temperature Protection

The control is designed to sense when the refrigerant temperature drops to a temperature where it is possible to freeze the air coil or the coaxial heat exchanger. The threshold temperature is field selectable for 10°, 20°, or 32°F. If the Freeze Sensor drops below the set temperature twice within 1 hour, the control board will initiate a hard lockout and the alarm contact will energize.

Low water temperature

The control is designed to sense when the leaving water temperature drops to a temperature where it is possible to freeze the coaxial heat exchanger or raises to a temperature high enough to cause possible damage to the compressor. The threshold

temperature is field selectable for 0°, 10°, 20°, 36°, or 125°F. If the sensor drops below (or above 125°) the set temperature twice within 1 hour, the control board will initiate a hard lockout and the alarm contact will energize.

Low Voltage (Brownout) Protection

The solid state control will monitor the 24 volt power input supplied to the board. If the supply voltage drops below 18 VAC, the control module will shut down the unit to protect electrical components from low line voltage conditions.

Soft Lockout Reset

This feature is used to minimize nuisance trips of safeties caused by temporary conditions that might inhibit the unit from performing normal functions. When a safety trip occurs, it is counted and the alarm is cleared when the condition returns to normal. If the alarm occurs two times within a 1-hour period, the heat pump remains off (locked out) until the unit is checked and the alarm is manually cleared.

Multi-Protocol DDC Controller

The Whalen Company water source heat pumps are available with a factory installed multi-protocol communication module that is designed to communicate with a building automation system (BAS). The I/O Zone 560 DDC control-

ler is designed to allow the integration of Whalen water source heat pump equipment into DDC systems. The I/O Zone 560 DDC controller has the ability to communicate through a choice of three widely used protocols: BACnet MS/

TP, Johnson Controls N2, and Modbus. The protocol of choice for the particular system is selected by simply configuring DIP switches on the DDC control. This flexibility allows one controller to be used in a multitude of buildings which use any of these three common protocols. The control serves as a node of information processing between the Whalen heat pump and the DDC network.

Features & Benefits

- Multi-Protocol communications provides DDC system flexibility.
- Supports native BACnet MS/TP communications the ASHRAE standard protocol for interoperability.
- Supports Johnson Controls N2 communications for integration into Johnson Controls Metasys DDC systems.
- Supports Modbus communications for integration into Modbus DDC networks.
- Four baud rate levels offer flexible communications speeds of 9600, 19.2k, 38.4k, or 76.8k baud. Enables building operators to easily upgrade firmware in the future.
- Removable field wiring connectors for ease of field service.
- Five (5) digital outputs.
- Six (6) inputs.
- Stand-alone or BAS integrated operational modes.

Hardware Specification

Power: 24Vac +-10%, 50 or 60Hz, 18VA power consumption, 26Vdc, Single Class 2 source only,

100 VA or less.

Physical size: 5-1/16" [129mm] width x 5-11/16" [144mm] height x 1-1/2" [38mm] (minimum panel depth).

Housing material: Rugged GE C2905HG Cycoloy plastic housing – complies with UL 94 V-O.

Environmental: 0 to 130 degrees F, 10% to 95% non-condensing.

Protection: Built-in surge transient protection circuitry. Module protected by Internal solid state Polyswitches

on incoming power and network connections.

Digital Outputs: 5 digital outputs, relay contacts rated at 1 A resistive @ 24 Vac, configured as dry contact,

normally open.

Universal inputs: 6 universal inputs. Inputs 1-6 configurable as thermistor or dry contact; inputs 1 and 2 also

configurable as 0-5 Vdc type inputs.

Communication ports: Port 1: Jumper configurable for ARCNET or EIA-485 communication. In ARCNET mode, the

port speaks BACnet (at 156k bps). In EIA-485 mode, the communication protocol and baud rate desired are DIP switch selectable between BACnet MS/TP, Modbus RTU, or N2. *Rnet port:*

Interface with a BACview5, BACview6, RS sensors, or local laptop.

Optional card port: LonWorks Option Card for connection to Free Topology LON networks (TP/FT-10 Channel).

Standard Range Units:

Units are designed to start in an ambient of 50°F (10°C) with entering air at 50°F (10°C), with entering water at 50°F (10°C), with nominal air flow and water flow (3.0 GPM/Ton), for initial start-up in heating and cooling mode.

Note: This is not a normal or continuous operating condition. It is assumed that such start-up is for the purpose of bringing the building space up to occupancy temperature and operating for extended periods of time.

Extended Range Units:

Units are designed to start in an ambient of 50°F (10°C) with entering air at 50°F (10°C), with entering water at 20°F (-7°C), with nominal air flow and water flow (3.0 GPM/Ton), for initial start-up in heating.

Units are designed to start in an ambient of 50°F (10°C) with entering air at 50°F (10°C), with entering

water at 30°F (-1°C), with nominal air flow and water flow (3.0 GPM/Ton), for initial start-up in cooling.

Note: This is not a normal or continuous operating condition. It is assumed that such start-up is for the purpose of bringing the building space up to occupancy temperature and operating for extended periods of time.

Environment

This equipment is designed for indoor installation only. Unconditioned locations such as attics, garages, etc., generally will not provide sufficient protection against extremes in temperature and/or humidity, and equipment performance, reliability, and service life may be adversely affected.

Power supply

A voltage variation of +/-10% of nameplate voltage is acceptable.

Capacity Table Legend

Btu/hr = British Thermal Units per Hour
CFM = Airflow Rate, Cubic Feet per Minute
EWT = Entering Water Temperature
GPM = Gallons per Minute
HC = Heating Capacity

HE = Heat of Extraction
HR = Heat of Rejection
kW = Kilowatts

SC = Sensible Capacity TC = Total Capacity

Capacity Table Legend:

Btu/hr = British Thermal Units per Hour
CFM = Airflow Rate, Cubic Feet per Minute
EWT = Entering Water Temperature
GPM = Gallons per Minute
HC = Heating Capacity

HE = Heat of Extraction HR = Heat of Rejection kW = Kilowatts SC = Sensible Capacity

TC = Total Capacity

For each of the five nominal fan sizes, the outdoor air CFM at the Tempered Outdoor conditions is mixed with the indoor supply air to the cooling / heating air coil.

TYPE T

(TOP DUCTED)

TYPE F-R (FRONT & RIGHT) RISERS MUST BE SIDE OPPOSITE SUPPLY DISCHARGE

LH SIDE RISER UNITS SHOWN ABOVE (RH OPPOSITE)

REAR RISER UNITS SHOWN ABOVE

Notes:

- 1. All Whalen supply grilles are fabricated of anodized aluminum and painted white.
- 2. See unit schedule for discharge types.
- Supply grilles are shipped loose for installation after drywall installation is complete.
- 4. Listed grille dimensions are for the grille opening size.
- 5. All front and top grilles are centered on the unit.

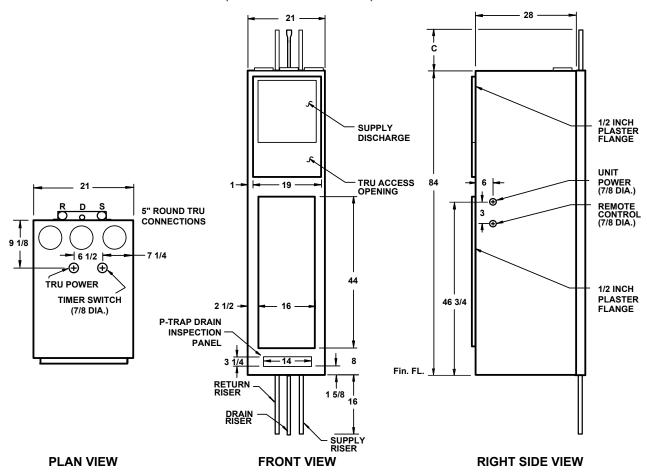

- 6. Unless otherwise noted, the grille blades will be vertical.
- 7. Registers must not be used.
- 8. Where Type T is combined with Type F, L or R, grille height will be that of a two-grille discharge.
- For top ducted units see drawing number 622-ITR for alternate TRU connections.
- For units with side risers and a side supply discharge, supply must be side opposite risers.

Whispertherm® Units with Top Connections - Rear Risers - Unit Sizes 0204-0804

Notes:

- The return air opening is always on the front of the unit.
- 2. Cabinet is acoustically and thermally insulated, and is fabricated of galvanized steel.
- 3. Supply, return and drain risers are type M copper. Riser assemblies include two shut off valves inside the cabinet. Standard units include high-pressure hose kits for connection of the refrigeration chassis or hydronic chassis.
- 4. See drawing 609-PT-ITR for plan view.
- Fan motor is constant-torque ECM type. With no heat/cool demand, fan will operate constantly on ultra Low speed.
- 6. TRU maximum exhaust = 162 CFM intermittant. TRU maximum ventilation = 95 CFM constant.
- 7. Side unit power and remote control are always side opposite riser.

Mechanical Specifications

WHISPERTHERM™ WATER SOURCE AIR CONDITIONER WITH THERMAL RECOVERY UNIT (TRU) AND HYDRONIC HEAT

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Vertical Stack Water Source Air Conditioner with Hydronic Heat

1.02 RELATED SECTIONS

1.03 REFERENCES

- A. ETL Listed under Underwriters Laboratories Standard for Safety UL1995 for heat pumps.
- B. AHRI ISO Standard 13256-1

1.04 DELIVERY, STORAGE AND HANDLING

A. Deliver products to site, store and protect from the weather and construction debris. Air conditioner cabinets and refrigeration chassis must be individually packaged and be tagged with site location, model number and configuration.

1.05 ENVIROMENTAL REQUIREMENTS

A. Protect units from construction debris by covering all openings prior to start-up of the equipment. Units must not be used for heating, cooling, or ventilation prior to the start-up of equipment for permanent use. Use of the equipment for the temporary heating, cooling or ventilation is prohibited.

1.06 FACTORY TESTING

A. All units shall be factory tested at normal operating conditions. Cabinets and fans shall be tested to verify proper fan and control operation. Refrigeration chassis shall be factory tested with cataloged water flow rates and sequenced to verify the proper operation of safety controls. Testing without utilizing cataloged water flow rates is unacceptable. All factory risers shall be pressure tested for leaks.

1.07 SUBMITTAL DOCUMENTATION

A. Standard submittals shall include capacities, drawings, electrical data, installation, operation and maintenance manuals and other details.

PART 2 PRODUCTS

2.01 TYPE

A. Vertical Stack Water Source Air Conditioner with integral risers, hot water heating coil, discharge arrangements, hose kits, and all accessories (ADD SPECIFIC OPTIONS HERE). Units shall be standard operating range 75°F to 120°F (23.9°C to 48.9°C) entering fluid temperature for water source air conditioning applications.

2.02 CAPACITY

A. Shall be as indicated on the drawings, which are based on Whalen units. Capacities shall be certified under AHRI ISO Standard 13256-1.

2.03 CABINETS

- A. The one-piece unit cabinet shall be fabricated of reinforced 22-gauge continuous G60 galvanized steel. All internal assemblies shall be welded and treated to prevent corrosion.
- B. The cabinet shall be insulated with 1/2-inch thick 2-pound density thermal and acoustical fiberglass insulation meeting material standard ASTM-C1071 and have an integral water repellent. The insulation shall have a fungi and bacteria resistant barrier with no growth conforming to ASTM-C1338, ASTM G21 and ASTM G22 and meet fire safety standards under NFPA90A and NFPA90B. (OPTION) 1-inch thick 1-1/2-pound density thermal and acoustical fiberglass insulated discharge plenum.
- C. The cabinet shall allow the placement of vertical risers on any side not being used for service access or discharge air openings.
- D. The cabinet will have slots with edge protectors to accommodate movement of the risers with the isolation valves affixed (see 2.05 B). The slots shall remain covered with insulation to minimize air infiltration.
- E. Cabinet return and discharge air openings shall be factory cut and flanged on all sides. All insulation located behind cabinet openings must be removed by the unit manufacturer prior to shipment.
- F. Cabinet design shall allow a minimum 5-inches below the chassis access opening to allow for full height baseboard.
- G. (OPTION) A factory installed vibration isolation pad shall be installed on the bottom of the unit.
- H. The air conditioner cabinets shall be shipped separately from, and prior to the refrigeration chassis for early installation at the jobsite.
- I. Cabinet design shall allow removal of the refrigeration chassis without a requirement to first remove the main fan or thermal recovery unit.
- J. Cabinet design shall allow removal of the thermal recovery unit without a requirement to first remove the chassis or main fan.
- K. Cabinet design shall include means to connect and seal the supply air opening to the Acoustical Air Panel mounted per Whalen instructions.
- L. Cabinet design shall offer ventilation air connections on its top. (OPTION 1) Alternate ventilation air connections available, on rear and/or one side, for air to and from the outdoors.

- M. Cabinet design shall include internal channels to direct air from the exhaust air inlet connection, through the thermal recovery core, and to the exhaust air exit connection.
- N. Cabinet design shall include internal channels to direct air from the outdoor air inlet connection, through the thermal recovery core, and to the supply side of the chassis air coil.
- O. Cabinet design shall include internal channels to direct air from the outdoor air inlet connection, through the thermal recovery core, and through the unit filter prior to contact with the refrigeration system.

2.04 REFRIGERATION CHASSIS

- A. The refrigeration chassis consisting of the compressor, air coil, water coil, expansion device, receiver, filter-drier, hot water heating air coil and safety controls shall be slide-rail base mounted in the cabinet, and shall be designed for easy removal after disconnecting the two hoses and a polarized electrical power plug.
- B. The compressor shall be the sealed hermetic type approved and tested for reverse cycle operation. Internal thermal overload protection shall be provided. The compressor shall be internally isolated and externally hard rubber mounted to the floating chassis. Compressor motors shall be permanent split capacitor (PSC) type. The compressor shall not operate on a call for heating.
- C. The air coils shall be copper tubes mechanically bonded to aluminum fins, multi-circuited to insure maximum coil distribution and effectiveness, and a minimum of three rows deep. The coil shall be rated to withstand 600 psig refrigerant working pressure. Face velocity shall not exceed 400 feet per minute to insure quiet operation and positive condensate drainage.
- D. The water coils shall incorporate an electro-coated steel outer tube and a copper inner tube. The inner tube shall be spirally fluted and bonded to the outer tube to insure controlled refrigerant velocity and distribution. The coil shall be rated to withstand 650 psig refrigerant and 400 psig fluid working pressures. (OPTION) Provide Cupro-nickel COAX coil.
- E. The hot water heating air coil shall be copper tubes mechanically bonded to the aluminum fins, multi-circuited to insure maximum coil distribution and effectiveness and a minimum of two (OPTION: three) rows deep. Face velocity shall not exceed 400 feet per second to insure quiet operation. The refrigeration circuit shall not operate on a call for heating.
- F. A three-way, two-position (On/Off) electric control valve (30 psi differential pressure) shall be factory mounted and wired into the refrigeration chassis to divert fluid flow between the water to refrigerant coil and hot water heating air coil. (OPTION) Provide two, two-way, two-position (On/Off) electric control valves (30 psi differential pressure) in lieu of a three-way control valve for variable flow systems. The valves shall factory mounted and wired into the refrigeration chassis to prevent fluid flow to the unit when a call for cooling or heating is not present.
- G. (OPTION) Automatic flow control valve An automatic flow control valve shall be provided with each chassis and be factory preset for a fixed flow rate regardless of system pressure. Each automatic balancing valve shall be capable of operation over a pressure differential range of 2 to 80 PSID. Valves must utilize threaded connections and be easily removable for cleaning and maintenance.
- H. The chassis shall be shipped separately from the WSHP cabinets to prevent exposure to, and fouling from finishing work.

2.05 RISERS

- A. The unit manufacturer shall furnish Type M (OPTION: Type L) copper supply and return condenser water risers as an integral factory-assembled component of the heat pump. Supply and return risers shall be protected by a galvanized steel pipe chase the length of the cabinet. (OPTION) Provide (3/8) (1/2)-inch thick closed-cell riser insulation the length of the cabinet for ground-source applications.
- B. Ball-type isolation valves shall be factory assembled on the risers by the heat pump manufacturer. The chassis shall be connected to the isolation valves through high-pressure stainless steel hoses provided by the unit manufacturer, to isolate compressor noise and vibration from the piping system. Connection of the refrigerant chassis to building water system through the use of unions is unacceptable.
- C. The unit manufacturer shall furnish the air conditioner cabinet with the supply and return risers connected together (short circuited) between the isolation valves to facilitate flushing by bypassing water directly into the return loop without the water passing thru any device in the unit (i.e. refrigeration chassis, automatic flow control valve).
- D. The condensate drain riser shall be Type M copper and insulated the length of the cabinet with 3/8-inch closed-cell insulation.

2.06 DRAIN PAN

A. The drain pan shall collect and drain condensate that may form from any component internal to the heat pump and shall be fabricated of welded and soldered 20 Ga. 304 stainless steel. The copper condensate drain shall be rolled and soldered into the pan.

2.07 FANS

A. The fan shall be slow speed forward curved centrifugal type capable of two fan speeds, and shall be accessible for removal and maintenance through the return air opening.

2.08 MOTORS

- A. Fan motors for heat pumps under 2-ton shall be of the permanently lubricated PSC standard or hi-static pressure (OPTION: ECM) type, as required; suitable for the current characteristics shown on the drawings, and shall have built-in thermal overload protection.
- B. Fan motors for heat pumps 2-ton and above shall be of the permanently lubricated constant-torque ECM (OPTION: constant-volume ECM) type, suitable for the current characteristics shown on the drawings, and shall have built-in overload protection.
- C. Motors shall be plug-in, multi-speed type with 1050-RPM maximum.
- D. (OPTION) Provide a two-speed fan switch located behind the acoustic return air panel. The fan switch must be configurable for use with available fan speed motor taps.

2.09 SUPPLY GRILLES

A. (STANDARD) The supply grilles shall be of the single deflection type fabricated of clear anodized aluminum. All supply openings shall be painted black with a damper assembly and sight baffle provided when one unit is serving two separate rooms.

(OPTION 1) The supply grilles shall be of the single deflection type fabricated of (factory white painted extruded aluminum) or (custom painted extruded aluminum) (SELECT ONE). All supply openings shall be painted black with a damper assembly and sight baffle provided when one unit is serving two separate rooms.

(OPTION 2) The supply grilles shall be of the double deflection type fabricated of (clear anodized extruded aluminum), (factory white painted extruded aluminum) or (custom painted extruded aluminum) (SELECT ONE). All supply openings shall be painted black with a damper assembly and sight baffle provided when one unit is serving two separate rooms.

2.10 RETURN AIR PANEL

- A. (STANDARD) Unit Mounted Acoustical Panel The return air opening shall be covered with a standard solid hinged front acoustical panel with return air entering through the bottom, top and both sides. The front panel shall be fabricated of etched galvanized steel painted appliance white. The return air panel shall allow for filter maintenance without the use of tools and be secured shut via magnets. The door opening shall be sized to allow direct removal of the cabinet inner panel and refrigeration chassis.
- B. The supply air section of the panel shall include a removable hinged door secured shut by magnets. The door opening shall be sized to allow either servicing or direct removal of the thermal recovery unit. The door shall house the supply air grille, sized per schedule.
- C. Standard supply air grille opening shall include snap-in style spring clip on each side to secure the supply air grille. Grilles shall be shipped with return air panel but NOT INSTALLED in the removable hinged door.

2.11 FILTERS

B. (STANDARD) Filters shall be 1" thick disposable fiberglass media, MERV 4.

(OPTION 1) Filters shall be 1" thick disposable pleated media, MERV 8.

(OPTION 2) Filters shall be 1" thick disposable pleated media, MERV 13.

(OPTION 3) Filters shall be 1" thick permanent aluminum cleanable media, MERV 4.

2.12 THERMAL ENERGY RECOVERY SECTION / OUTDOOR AIR

- A. Cabinets shall be supplied with a thermal recovery unit that is easily accessible and removable for servicing. Duct connections for the thermal recovery unit shall be standard 5 inch diameter.
- B. The thermal recovery unit shall be fabricated from heavy-gauge galvanized steel. A ½ inch drain hose emptying into the cabinet drain pan shall be provided. A positive closing damper shall be included on the exhaust air discharge duct connection. Electrical connection for the module shall be made by a male plug into a female receptacle supplied in the cabinet.
- C. Air filters shall be supplied for the fresh air and exhaust air flows. Filters shall be easily serviced or replaced through the front of the unit. Filters shall be washable.
- D. The thermal recovery unit shall house fresh air and exhaust air blowers. Blowers shall be statically and dynamically balanced, direct drive, single phase with integral thermal overload protection. The blower wheel shall be the forward-curved SWSI centrifugal type.
- E. The fresh air and exhaust air blower speed shall be set at the factory.
- F. The thermal recovery core shall be protected by a defrost sensor that terminates operation of the fresh air blower.
- G. (OPTION 2) An optional timed washroom exhaust control with reset to be provided with decorative momentary switch to activate the exhaust fan for a maximum of 20 minutes.
- H. (OPTION 3) Factory set dedicated constant ventilation rate selection 1) 25 CFM 2) 35 CFM 3) 50 CFM 4) 70 CFM 5) 90 CFM.
- (OPTION 4) Factory set nominal intermittent exhaust rate high speed selection 1) 100 CFM 2) 150 CFM when used in conjunction with optional timed momentary switch.

2.13 POWER SUPPLY

A. Single point field power connection is made to unit junction box through either of the 7/8" knockouts located on the side or on the top of the cabinet as shown on the drawings.

(OPTION 1) Each unit shall include a non-fused disconnect switch, factory mounted and wired.

(OPTION 2) Each unit shall include a fused disconnect switch, factory mounted and wired.

2 14 CONTROLS

- A. Unit shall include a solid-state control board as part of the unit control system incorporating these features:
 - a. Random start compressor protection.
 - b. Anti-short cycle compressor minimum OFF time delay.
 - c. Safety controls that protect the compressor from the following conditions:
 - i. High pressure
 - ii. Low airflow
 - iii. Low liquid flow
 - iv. Low entering air temperature
 - v. Brown-out power conditions
 - vi. Condensate Overflow Protection
 - d. Status LED indicating the device causing a fault condition.
 - e. Soft lockout feature that provides for an automatic reset prior to the initiation of a hard lockout.
 - f. Test mode capability with shortened time delays for servicing.
 - g. (OPTION 1) Low pressure
 - h. (OPTION 2) Low/High liquid temperature protection with three different settings based on liquid properties.
- B. The unit shall default to continuous ultra-low main fan speed if no call for Heating or Cooling.
- C. The thermal recovery unit shall have independent dedicated electrical power and both blowers shall operate continuously.
- D. (OPTION 1) Factory set dedicated constant ventilation rate selection 1) 25 CFM 2) 35 CFM 3) 50 CFM 4) 70 CFM 5) 90 CFM.
- E. (OPTION 2) Timed washroom exhaust control with reset to activate 100 CFM intermittent exhaust high fan speed for a maximum of 20 minutes. Factory set dedicated constant ventilation rate selection 1) 25 CFM 2) 35 CFM 3) 50 CFM 4) 70 CFM. (Decorative switches must be purchased separately. Multiple switches may be used for a single unit.)
- F. (OPTION 3) Timed washroom exhaust control with reset to activate 150 CFM intermittent exhaust high fan speed for a maximum of 20 minutes. Factory set dedicated constant ventilation rate selection 1) 35 CFM 2) 50 CFM 3) 70 CFM 4) 90 CFM. (Decorative switches must be purchased separately. Multiple switches may be used for a single unit.)

2.15 THERMOSTAT

- A. The heat pump manufacturer shall provide a 24-volt manual changeover wall thermostat with a HEAT-OFF-COOL system switch and AUTO-ON fan selector switch.
- B. On units up to two tons of cooling, the thermostat shall be unit mounted at a height of 48 inches from the bottom of the cabinet. On units greater than two tons of cooling, the thermostat shall be remote mounted.
- C. Others shall install thermostat by plugging into the control wiring with a polarized male-female plug after the walls are finished when unit mounted or attaching to color coded pigtails when remote mounted. High voltage, return air thermostats with remote bulbs subject to damage during routine service will not be accepted.

2.16 SPARE PARTS

A. The installing contractor shall provide to the Owner one spare chassis for each fifty heat pumps of a given size. (Add any additional spare parts requirements here).

PART 3 EXECUTION

3.01 INSTALLATION

- A. Furnish as shown on the drawings and as specified herein, vertical stack water source heat pumps with integral risers, and with capacity and electrical characteristics as scheduled. Units shall be Series VI as manufactured by The Whalen Company of Easton, MD.
- B. Install in accordance with manufacturer's installation instructions. Install units plumb and level, and maintain manufacturer's recommended clearances for the unit and accessories.
- C. Follow manufacturer's recommendations for cleaning and flushing.

The The Whalen Company
Whalen Limited Express Warranty
Company Water-to-Air Heat Pump Standard Warranty

The Whalen Company warrants to the purchaser each water-to-air heat pump to be free from original defects in materials and workmanship.

Where inspection by an authorized representative of The Whalen Company confirms such defects to be present, for a period of eighteen months from date shipment, Whalen will furnish replacement components or materials to the original purchaser without charge.

οţ

damages; (9) Equipment subjected to corrosion or abrasion; (10) Equipment manufactured or supplied by others; (11) Equipment which have been operated in any manner contrary to The Whalen Company printed instructions; or (12) Equipment which have defects, damage or insufficient performance as a result of insufficien Equipment which have defects or damage which result from fungus or bacteria damage which result from improper installation, wiring, electrical imbalance characteristics or maintenance; or are caused by accident, misuse or abuse, fire, while the facility is still under construction is of such portion or component; (4) Equipment on which the unit identification tags or labels have been removed or modified; (5) Equipment which have defects Fhis Limited Express Warranty is intended to cover original equipment defects only and does not cover or apply to: (1) Air filters, refrigerant, fluids, oil; (2 relocated after initial installation; (3) Any portion or component of any system that is not supplied by The Whalen Company, regardless of the cause of a contaminated or corrosive air or liquid supply, operation at abnormal temperatures, or unauthorized opening of refrigerant circuit; (8) Mold, or incorrect system design or the improper application of The Whalen Company products flood, acts of God, alteration or misapplication of the product; (6) Equipment used as temporary heating or cooling considered misuse and as such, will void all warranty coverage regardless of the cause of failure; (7)

The Whalen Company neither assumes nor authorizes any person to assume for it any obligation or warranty other than those stated herein.

This Limited Express Warranty does not cover labor charges associated with making repairs, inspection and diagnosis of malfunctions, all field labor in connection with removal and transportation to and from a repair facility and all field labor in connection with removal and transportation to and from a repair facility and all field labor in connection with reinstallation after repairs are completed. However, The Whalen Company at its sole discretion may provide a labor allowance in cases of DOA (Dead on Arrival) equipment for replacement or repair of defective components within 30-days of start-up or 90-days from factory shipment, whichever comes first. After this period only the Limited Express Warranty will apply. Labor will be paid per The Whalen Company Warranty Labor Allowance schedule Whalen shall not, in any event, have any liability under this warranty unless and until it has been paid Replacement or repair under this warranty will not extend the warranty time periods defined above. in full for the equipment supplied. The warranty period shall commence on the date of shipment,

Ilpment supplied. I ne warranty period shall commence o however, whether or not payment has been made.

The Whalen Company has no liability for incidental or consequential damages arising out of the ownership, use, or operation of Whalen heat pumps.

his warranty applies only to Whalen heat pump installations in the fifty United States and in Canada. There are no warranties outside those areas.

THERE ARE NO WARRANTIES WHICH EXTEND BEYOND THE DESCRIPTION ON THE FACE HEREOF. NO IMPLIED WARRANTY OR MERCHANTABILITY SHALL ACCOMPANY THE SALE OF THIS EQUIPMENT, AND THIS EXPRESS WARRANTY IS INTENDED TO AND DOES REPLACE ANY IMPLIED WARRANTY OF MERCHANTABILITY.

This warranty, its limitations and its exclusions are to be governed by the laws of Maryland. Although some warranties may vary in their effect and coverage from locality, this warrantly, its effects, coverage and remedies are only those available in Maryland.

Water-to-Air Heat Pump with 5 Year Compressor Warranty **Limited Express Warranty** 'he Whalen Company ompany

The Whalen Company warrants to the purchaser each water-to-air heat pump to be free from original defects in materials and workmanship.

Where inspection by an authorized representative of The Whalen Company confirms such defects to be present, for a period of eighteen months from date of shipment, Whalen will furnish replacement components or materials to the original purchaser without charge.

In addition, for a period of sixty months from date of shipment, Whalen will furnish a replacement for any compressor found by an authorized representative of The Whalen Company to contain an original defect.

ire, flood, acts of God, alteration or misapplication of the product; (6) Equipment used as temporary heating or cooling while the facility is still under construction is defects or damage which result from improper installation, wiring, electrical imbalance characteristics or maintenance; or are caused by accident, misuse or abuse, Equipment relocated after initial installation; (3) Any portion or component of any system that is not supplied by The Whalen Company, regardless of the cause of the failure of such portion or component; (4) Equipment on which the unit identification tags or labels have been removed or modified; (5) Equipment which have considered misuse and as such, will void all warranty coverage regardless of the cause of failure; (7) Equipment which have defects or damage which result from a contaminated or corrosive air or liquid supply, operation at abnormal temperatures, or unauthorized opening of refrigerant circuit, (8) Mold, fungus or bacteria damages; (9) Equipment subjected to corrosion or abrasion; (10) Equipment manufactured or supplied by others; (11) Equipment which have been operated in any manner contrary to The Whalen Company printed instructions; or (12) Equipment which have defects, damage or insufficient performance as a result of ... 0 This Limited Express Warranty is intended to cover original equipment defects only and does not cover or apply to: (1) Air filters, refrigerant, fluids, insufficient or incorrect system design or the improper application of The Whalen Company products.

The Whalen Company neither assumes nor authorizes any person to assume for it any obligation or warranty other than those stated herein.

This Limited Express Warranty does not cover labor charges associated with making repairs, inspection and diagnosis of malfunctions, all field labor in connection reinstallation after repairs are completed. However, The Whalen Company at its sole discretion may provide a labor allowance in cases of DOA (Dead on Arrival) equipment for replacement or repair of defective components within 30-days of start-up or 90-days from factory shipment, whichever comes first. After this period with repair or replacement of parts, all field labor in connection with removal and transportation to and from a repair facility and all field labor in connection with einstallation after repairs are completed. However, The Whalen Company at its sole discretion may provide a labor allowance in cases of DOA (Dead on Arrival) only the Limited Express Warranty will apply. Labor will be paid per The Whalen Company Warranty Labor Allowance schedule. Replacement or repair under this warranty will not extend the warranty time periods defined above. Whalen shall not, in any event, have any liability under this warranty unless and until it has been paid in full for the equipment supplied. The warranty period shall commence on the date of shipment, however, whether or not payment has been made.

This warranty applies only to Whalen heat pump installations in the fifty United States and in Canada. There are no warranties outside those areas.

The Whalen Company has no liability for incidental or consequential damages arising out of the ownership, use, or operation of Whalen heat pumps.

THERE ARE NO WARRANTIES WHICH EXTEND BEYOND THE DESCRIPTION ON THE FACE HEREOF.
